

# CLEAR ROUTE TO HEALTHY PRODUCT CONTENT

Medical technology manufacturer PAJUNK® automates its product information management with services and solutions from Bayard Consulting Group

## THE CUSTOMER

Pajunk Group is among the world's leading international medical technology manufacturers for regional anaesthesia, neurology, pain therapy, minimally invasive surgery and biopsy. The owner-managed company has its headquarters in Geisingen, Germany, and sales offices in Geisingen, Atlanta (USA) and Newcastle (UK).

In regional anaesthesia, pain management and neurology, Pajunk is the market-leading full-range supplier for all single stage and continuous procedures with its product systems of cannulas, catheters and nerve stimulators.

## INITIAL SITUATION AND CHALLENGE

In the past, Pajunk could only transfer and publish its product information to buying groups and governmental regulatory authorities with a high degree of customisation and modification. A mass data upload was not possible.

The aim of the project was to be able to automate the publication of master data as much as possible, in accordance with the quality and validation rules of the various national and international healthcare authorities.

## CLEAR VISION AND STRATEGY

»Working alongside Bayard Consulting's master data experts, we have partners who understand our specific requirements in the healthcare sector very well.«

(Christian Quaß • Director Regulatory Affairs • Pajunk GmbH Medizintechnologie)

Pajunk chose Bayard Consulting Group because of their deep industry expertise. Bayard Consulting had recently contributed significantly to establishing a widely respected standard for product master data in the healthcare sector. This is based on HCDP (Healthcare Content Data Portal), a master

data procurement portal in the healthcare industry used by leading purchasing groups, and COVIN (Content Validation Network), a regulatory framework that has also been aligned to the GDSN standard of the GS1 community.

## THE PROJECT

As a first step, Bayard's consultants worked with all departments responsible for product information management at Pajunk to develop a shared understanding of the data governance process within the organisation. Together, a clear vision and strategy for automated master data

management was drafted and the necessary processes and a viable IT infrastructure were prepared. This preliminary work was an important prerequisite for a successful project within the agreed timeframe and on budget.

### PROJECT-CHALLENGES

- > Merge data from different sources into a 'single source of truth'
- > Convert ERP attributes into healthcare attributes, based on country-specific healthcare standards
- > Implement all regulatory requirements
- > Improvements to the internal data governance process

With a clear goal in mind, the two partners entered into the joint project. In order to implement a central solution for master data management, Pajunk introduced the product content eXchange platform SyncManager from the Bayard Consulting Group. It bundles product master data from the company's ERP system with marketing and logistics content for each product in a central location. Within the solution, captured product content can be enriched, validated and transferred to various output channels by the project managers according to the quality rules of the healthcare authority. Without the need for manual, error-prone publishing of individual products.

Automated workflows in SyncManager use error messages to alert Pajunk staff directly to potential errors in the data set or missing attributes for a specific output channel. Those in charge can then correct data before it is transferred and published to the healthcare authorities.

»WITH BAYARD CONSULTING ON BOARD, THINGS ARE RUNNING SMOOTHLY.«

(Christian Quaß • Director Regulatory Affairs • Pajunk GmbH Medizintechnologie)

**Connection to the HCDP and the US FDA is in place**

With SyncManager and GDSN data pool b-synced from Bayard Consulting Group, Pajunk now also publishes automatically to the Healthcare Content Data Portal (HCDP) of the hospitals' purchasing group. HCDP is important to the German market and already has market coverage of around 75 percent.

Thanks to the expertise of the Bayard Consulting Group in the healthcare sector, the connection to the Global Unique Device Identification Database (GUDID) of the US Food and Drug Administration (FDA) was also successfully changed within a tight schedule from a manual individual HL7 data upload to a mass upload via an individual connector. »The consultants from Bayard Consulting saved us a lot of time and effort by communicating professionally and expertly with officials at the FDA,« Christian Quaß, Director Regulatory Affairs at Pajunk, is pleased to say.

**UDI Connector up and running**

An important prerequisite for placing medical devices on the market, not only in the European and US markets but also in many other countries such as China, Saudi Arabia and South Korea, is the uniform labelling of all products with a Unique Device Identification (UDI). The UDI is a legal requirement for the globally unique and machine-readable labelling of medical devices.

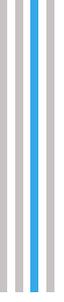

During the implementation of a UDI connector at the Pajunk Group, error feedback from the various health authorities was handled within the workflow and analysed and corrected by the Pajunk users.

**MILESTONES OF PROJECT IMPLEMENTATION**

- > Agile implementation of the product content eXchange platform SyncManager
- > Compliance with GS1 Healthcare standards
- > Development of a UDI connector to support the seamless submission of data to the FDA
- > Establishment of a workflow for the creation, validation, transformation and publication of product information - prior to sharing with healthcare authorities

## RESULTS

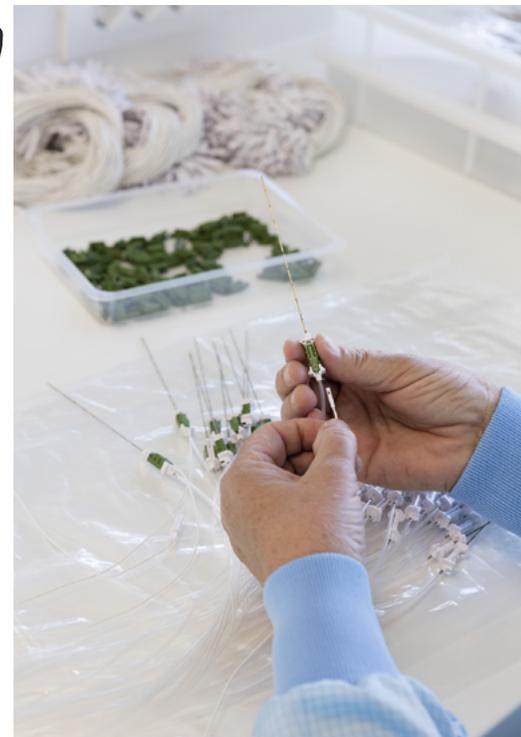

Now, Pajunk employees responsible for product information management maintain their own product data centrally in SyncManager and only share fully validated data with recipients such as the US GUDID and the German HCDP. GS1 organisations' Global Data Synchronisation Network (GDSN) forms the transport path for this.

A clear workflow regulates the creation, validation, transformation and publication of items at Pajunk before they are shared with the connected healthcare authorities. As a result, Pajunk can quickly be up and running with its customers using quality-checked product information according to UDI standards.

### PROJECT OUTCOME AND EXPERIENCE

- > Timely publication to FDA/GUDID, taking into account validation and business rules of each authority
- > Implementation of data governance improvements reflected in SyncManager
- > Responsive team with PIM expertise and know-how of Pajunk's global business

### **SyncManager exceptionally user-friendly**

»The SyncManager user interface is clearly structured and particularly easy to navigate,« explains a delighted Alen-Kaan Şen, Regulatory Affairs, Pajunk GmbH Medizintechnologie.

»Before publishing we can check separately for each healthcare authority whether the data meet the quality and validation rules of the respective recipient.«

In addition, a powerful data quality dashboard makes the status of data quality across all items in SyncManager visible at all times.

# SYNCMANAGER

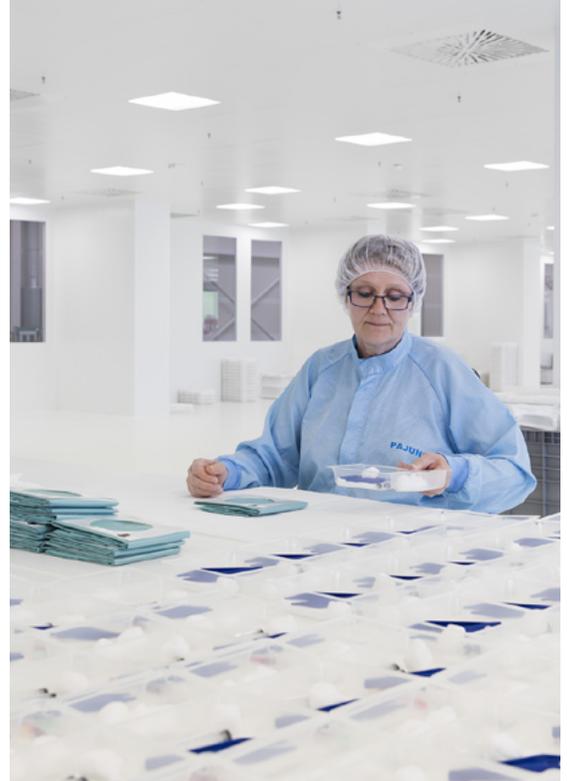

## OUTLOOK

The Pajunk Group now plans to deploy SyncManager to standardise master data management for its three independently operating international sales subsidiaries. In the process, further complex regulatory requirements will have to be implemented in the various target markets. With the help of Bayard Consulting's specialists, further technical solutions will be provided, tested and launched.

Pajunk also wants to optimally prepare for the implementation of the EUDAMED database with the help of Bayard Consulting through the necessary organisational structure, processes and interfaces.

The Medical Device Regulation MDR requires manufacturers of medical devices to store product data related to their products for European use in EUDAMED. Medical devices offered in the USA must first be registered electronically in the FDA's GUDID product database. In the future, high quality, up-to-date product information from Pajunk Group should be able to be registered electronically in the EUDAMED database.

From January 2022, the Pajunk Group would also like to deliver its product content in quality-assured electronic form via the GDSN

to the British NHS and, as soon as Machine-2-Machine is available, to the MHRA / DORS database. Bayard Consulting Group will also provide technical support to this project phase and implement the validation rules and all regulatory requirements into Pajunk Group's existing IT infrastructure and workflows.

Based on the positive experience and close cooperation with Bayard Consulting, Pajunk Group plans to continue to rely on the expertise of the Cologne-based master data experts for the healthcare sector and to take all necessary steps for the digitalisation of master data management together.
